### Definitions

**Maximum Contaminant Level Goal or MCLG:** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Contaminant Level or MCL:** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology, BAT.

**Maximum Residual Disinfectant Goal or MRDLG:** The level of a drinking disinfectant below which there is no known or expected risk to health.

**Maximum Residual Disinfectant Level or MRDL:** The highest level of a disinfectant allowed in drinking water.

**Treatment Technique or TT:** A required process intended to reduce the level of a contaminant in drinking water. triggers treatment or other requirements which a water system must follow.

**mrem/yr** = millirems per year (a unit of absorbed radiation dose)

**ND** = Non-detected, constituent not present at detection limit

**NTU** = Nephelometric Turbidity Units

**P/A** = Presence / Absence or Present / Absent

**pCi/L** = picocuries per liter (a measure of radioactivity)

**ppm** = parts per million, or milligrams per liter (mg/l)

**ppb** = parts per billion, or micrograms per liter (ug/l)

**RAA** = Running Annual Average

**uS/cm** = microSiemens per centimeter

**Waiver** = an exemption to perform monitoring issued by the ADH based on system evaluations

There were no EPA Safe Drinking Water Act (SDWA) monitoring or compliance violations in 2018 for Beaver Water District.

\* Analyzed and reported by Beaver Water District. All other analyses in this report by ADH.
